# The Axeom Challenge

**Time:** 72 hours from the moment you receive this.

**Language:** Use any language. You can use AI to translate this page. We judge your thinking and your results, not your English.

**All data is fake.** The people and companies are not real. Your data pack is unique to you.

**Read this first:** This test is hard on purpose. **Nobody finishes everything in 72 hours.** We want to see what you choose to do first, why, and what you actually get done. There is no interview. **Your submission is your interview.**

---

## The situation

Axeom is a content studio in Dallas. We film videos for businesses and rent out our podcast studio. About 30 clients.

The business runs on files that don't talk to each other:

| File | What it is |
|---|---|
| `leads.csv` | People who asked about our services |
| `bookings.csv` | Shoots and studio sessions |
| `invoices.csv` | Bills from our billing tool |
| `payments.csv` | Money that actually came into the bank |
| `production_board.csv` | Videos our editors work on |
| `messages.txt` | Emails, WhatsApp, voice notes, Instagram DMs, website forms |
| `team.csv`, `costs.csv` | Our team, their pay, and our costs |

The owner has these problems:

- Clients say their video edits come back wrong.
- He doesn't know who really owes him money.
- Leads and good opportunities slip through the cracks.
- His current task screen is confusing. He opens it and doesn't know what to do first.

**The data is messy, like real life.** Names are spelled differently. Some files disagree with each other. Some files are wrong. Finding that out is part of the job.

The data's "today" is **October 6, 2026**.

**You can't ask us questions.** That's on purpose. Write down every question you would have asked, and what you decided to assume instead. Good assumptions count.

---

## Part 1: Find the problems (think)

1. **Who are our real clients?** How many, and who are they?
2. **Money.** Who owes us? Do we owe anyone? Did we do work we never billed? Where is the billing tool wrong? Give totals.
3. **Why do client requests get lost?** Since when? Prove it with the data.
4. **Which client is most likely to leave us?** What would you do about it this week?
5. **Which marketing channel brings the most profitable clients?** What can't you tell from this data?
6. **You're the owner on Monday morning. What are the first 3 things you do?** Why those 3?

Put your answers in `answers.json` (the template is in your pack). Fill in every field you can. Leave a field empty rather than guess. **A made-up number is worse than "I don't know".**

## Part 2: Fix it (get it done)

Build the simplest thing that stops these problems from happening again. Use any tools: AI, spreadsheets, no-code, code. Free tools only.

It must:

- **Be live.** A real link that works on a phone. Not a mockup, not slides. **No login.** Use a hard-to-guess link instead (the data is fake).
- **Connect the data.** Each client linked to everything about them, even when names are spelled differently.
- **Take new files.** Have an **"Add new files"** button that accepts files in the same formats as your pack. **We'll upload new files you've never seen** and check that everything updates correctly, without you touching it.
- **Pass the 10-second test.** The owner opens it on his phone and knows what to do first within 10 seconds. Less is more. If it adds confusion, it failed.
- **Suggest, never act alone.** For example: "This invoice is 21 days late. Send a reminder?" The owner says yes or no. Nothing gets sent automatically.

## Part 3: Learn something new, fast

Use **Jev** (https://docs.typesafe.ai) for at least one job in your system. You've probably never used it. That's the point: we want to see how fast you learn a new tool from its docs. Pick a job where it actually helps. Tell us why you picked it, and measure how well it worked (for example: "I checked 40 messages by hand, and Jev got 36 right").

---

## What to submit (one zip or one shared folder, within 72 hours)

1. `answers.json` : the filled-in template.
2. **The live link** (also inside answers.json).
3. `writeup.md` or PDF, 2 pages max:
   - How you found each answer (your proof).
   - How your system works, and what it costs per month.
   - **What doesn't work yet.**

    - Your Jev job: why that job, and how accurate it was.
    - What you'd do in your next 2 weeks.
4. `assumptions.md` : the questions you'd have asked us, and what you assumed instead.
5. `daily_log.md` : for each day, what you did, what you changed your mind about, and what went wrong.
6. **A video, 5 to 10 minutes, with its transcript** (Loom gives you one for free). Show your system working. Then, **with no notes and no cuts, camera on**, answer:
    - What was the hardest part, and how did you solve it?
    - What did you get wrong at first?
    - What would you tell the owner to stop doing?

Missing the live link or answers.json means we can't score you.

---

## How we score

- **Did you find the truth?** We check your answers.json against what's really in the data.
- **Does it work?** We open your link on a phone, upload new files, and check the results.
- **Is it simple?** The 10-second test.
- **How do you think?** Your writeup, assumptions, daily log and video.
- **Do you learn fast?** Your Jev job and how you improved over the 3 days.
- **Are you honest?** About what you don't know and what doesn't work.

Good luck.
